**Subject: Letter of Motivation for Master's Program Scholarship in Data Science and AI**

Dear CITEDI-IPN Graduate Department,

I am really honored to apply for the Masters Program as I pursue my academic and professional aspirations in Data Science, AI and Computer Intelligence. This scholarship represents an invaluable opportunity for me to achieve my educational goals and make a meaningful impacts in my community and beyond.

I am currently an Higher National Diploma Graduate from Ogun State Institute of Technology, Igbesa in Computer Science. Throughout my academic journey, I have maintained a strong commitment to excellence and diligence, demonstrated through maintaining Distinction Grade throughout my entire semester during my Higher National Diploma, I have also engaged in an inter-schools competition on software challenge where I represented my Institution and we brought back the award of the second position. My passion for Data Science, Analysis, Machine Learning and Software Development has driven me to engage in research projects in Education, Finance, also engaged in two great community service sensitization program during my National Youth Service Corps - (A one year program organized by the government of my country) the community service project was related to impacting the youths in Highest Institutions with needed Tech Skills to excel.

Beyond academics, I have actively participated in impacting my community on tech skills for free, I was also the president of one of the best community development groups during my national youth service corps where my group built a solution software to help manage attendance and corp members information. These experiences have honed my skills in Data Analysis, Software development, Data Science, also deepened my understanding of leadership by example and reinforced my commitment to using my knowledge to address real-world challenges.

However, financial constraints present a significant challenge to continuing my education. Receiving this scholarship would alleviate the financial burden on my family and allow me to focus entirely on my studies, research, and professional

development. More importantly, it would empower me to contribute meaningfully to the advancement of technology, healthcare innovation, or educational reform in underprivileged communities.

I strongly believe that my dedication, perseverance, and passion for Tech and research make me a worthy recipient of this scholarship. If granted this opportunity, I will not only strive for academic excellence but also use my knowledge and skills to make a lasting impact on society. I am excited about the possibilities that this scholarship will unlock and the chance to be part of a network of scholars striving for excellence and innovation.

Thank you for considering my application. I look forward to the possibility of contributing to this great community and would be honored to discuss my aspirations further.

Sincerely,  
Bassey Wonder Paul
